## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4, 10 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Wellbourn et al. (USPN 5656507).

Wellbourn teaches a component mounting method comprising printing solder so as to shift and create a predetermined offset from the center of the electrode pad, placing the component after solder printing such that a placement position is shifted by the offset (figure 2), moving the component toward the center by melting the solder and securing the component by cooling as is conventional (col 4 line 45 – col 5 line 14). The offset takes into account a self-aligning effect (col 1 lines 53-67). The electrodes are line electrodes (may be L-shaped or rectangular, figure 1 and col 5 lines 48-53).

### ***Allowable Subject Matter***

3. Claims 5-9 and 12-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 1725

4. The following is a statement of reasons for the indication of allowable subject matter: The closest prior art teaches the invention essentially as claimed but only teaches two electrode lines. There is no disclosure of more lines or their configuration relative to a solder offset for component alignment. See Wellbourn (USPN 5656507) and Michael (USPN 6317513 B2).

### ***Response to Arguments***

5. Regarding applicant's argument that Wellbourn does not teach the offset feature, see figures 2 and 3 which show solder (26) printed on the electrode (18) at a predetermined offset from the center of the electrode. The component (11) is mounted at the offset and solder is then melted by heating. The solder moves or shifts along the surfaces of the electrodes and is thereby aligned at the correct position (col 2 lines 1-51 and col 5 lines 1-15 and lines 31-38). See also Wellbourn claims 2, 13-15 and 29-31.

Therefore the 102 rejection of claims 1-4, 10 and 11 as anticipated by Wellbourn stands.

### ***Conclusion***

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

Art Unit: 1725

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
